

The Remote Control Unit (RCU) allows the *Sapura SRP2000 TETRA* terminal to be used in a fully covert manner, by removing the main functions required for surveillance use, into a compact hand-held device.

The RCU provides the following remote features;

- **PTT (Push to Talk)**
- **Tone Transmission**
- **Talk Group Selection (10 position)**
- **Volume Up/Down**
- **Emergency (Function software programmable)**

All RCU buttons provide tactile operation, combined with audio confirmation via the wireless earpiece, to provide operator confidence, without the need to view the terminal LCD screen.

For additional flexibility, the RCU includes a 3.5mm auxiliary socket, to allow the connection of a conventional "torpedo" or similar button, permitting the RCU to be located in the pocket for easy access, but retaining the facility for handheld operation of PTT and Tone operation.

To complete the *SRP2000* bodyworn surveillance system, a range of covert accessories are available for use with the RCU, including combined microphone/inductors, neckloop inductor/microphone, 2 wire kits, carrying harnesses and a full range of covert wireless earpieces.
