

Sepura SRH "SPIDER" Covert Car Kit

The Sonic SRH "Spider" Kit provides a fully featured covert vehicle installation system, based around the Sepura SRH handheld TETRA terminal.

As all the essential features required to control the terminal are provided on the supplied Remote Control Unit (RCU), the SRH terminal can be located under a seat or in the boot of the vehicle, fitted within its storage cradle and charging from the vehicle battery.

The Vehicle Interface Unit provides the connection point for all of the

audio and control accessories supplied as part of the installation kit, allowing easy installation and maintenance.

Reception of incoming radio traffic can be switched between loudspeaker and the roof or seat mounted inductive loop, allowing the use of covert inductive wireless earpieces.

Changeover between loudspeaker / loop is carried out on the supplied Switch Panel, which is normally mounted within the glove compartment or centre console area of the vehicle and also provides the

system power ON/OFF switch location and system status LED indicator.

The Remote Control Unit provides handheld operation of PTT, Tone, Volume, Emergency and Talkgroup Selection (1-9), with the facility to add additional remote buttons for PTT and Tone operation also provided as part of the installation kit.

Sonic Communications (Int) Ltd can provide a full installation service, either on-site or at our purpose built Specialist Vehicle Installation facility, located in Birmingham.
