

Covert Surveillance Harness With LD5 Micro Earpieces

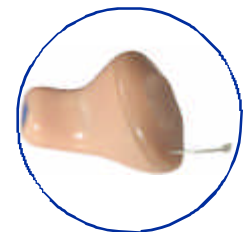

FOR SECURE AND DISCREET PERSONAL COMMUNICATIONS.

Someone said "that a good covert surveillance kit should be worn from 6.00 in the morning until 11.00 in the evening – if it's still comfortable to wear and still works well, it's good!"

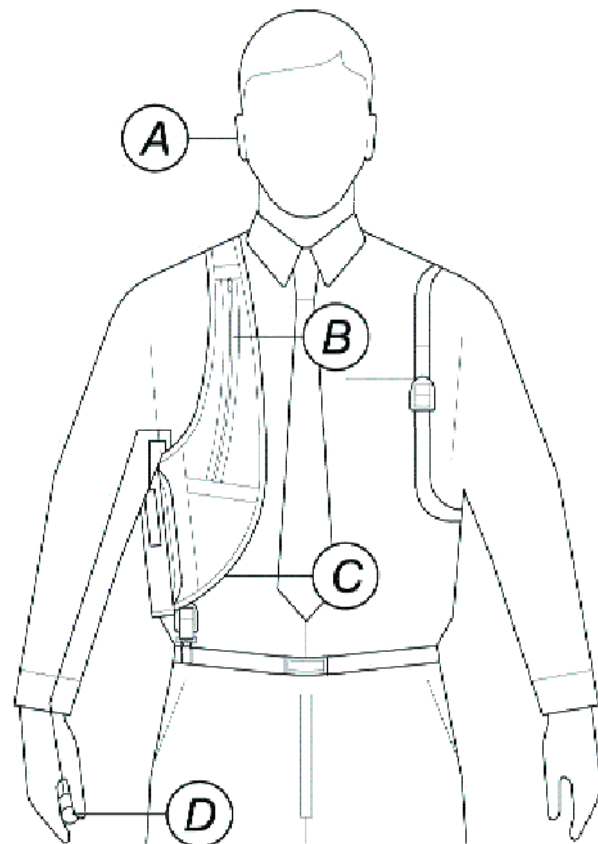

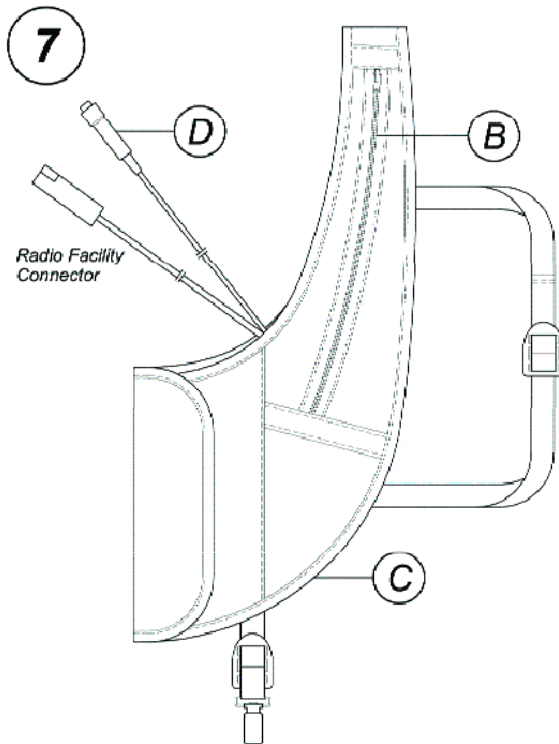

Hundreds of hours of testing and our objective to offer the smallest, lightweight, most practical kit available makes our solution ideal for Special Operations, Police, Paramilitary and Diplomatic Protection Groups.

LDS WIRELESS EARPIECE – STANDARD

The "LDS" wireless earpiece is based on a conventional analogue design, incorporating the audio quality, reliability, long battery life and comfort, which has long been associated with the "LDS" earpiece range.

NATO codified and independently tested as meeting Health & Safety requirements, the LDS wireless earpiece is currently the highest volume selling wireless earpiece in the United Kingdom.

LD55 STEALTH WIRELESS EARPIECE – SQUELCHED

The "LD55" Stealth wireless earpiece incorporates a pre-set level squelch gate combined with a high performance band pass filter, to switch-off the earpiece under no receive signal conditions, therefore maximising battery life and removing the amplifier hiss associated with non-squelch devices. The Stealth earpiece assists with the rejection of unwanted electromagnetic interference.

LDS (DRC) WIRELESS EARPIECE – COMPRESSION

The LDS(DRC) Dynamic Range Compression wireless earpiece utilises the standard LDS shell fitted with an advanced electronic compression circuit, to ensure the maximum sound output level does not exceed pre-set limits under any circumstances.

Already selected by several Organisations following trials, the LDS(DRC) micro universal fit (pictured right) is the latest addition to the range of Covert Wireless Earpieces available from Sonic Communications (Int) Ltd.
