

Ruggedised Microphone/PTT & Earpiece

SONIC
COMMUNICATIONS

The Ruggedised Microphone/PTT & Earhanger accessory, provides a reliable and cost effective solution in allowing radio terminals to be worn at waist level, by removing the transmit and receive audio functions, along with an easy to operate PTT button, without the bulk of a conventional remote speaker/microphone (RSM).

A key feature of the product is that its earpiece socket is compatible with receive devices terminated to connect directly to the radio terminal, therefore requiring only one type of earpiece to be issued. This allows the terminal to be either worn at chest level (along with the earpiece connected directly), or at waist level (with the earpiece connected via the Ruggedised Microphone/PTT assembly)

Fitted with a high performance noise cancelling microphone, the device is suitable for general use, or in high ambient noise applications as may be found at football grounds for example.

The product can be supplied for use with existing earpieces, or supplied with a number of alternative designs, as shown on the datasheet.

Optional Ear Hangers

The accessory is supplied in a weatherproof enclosure, a 360° clothing clip.
