Sepura Audio Accessory Adaptor Kit:

The Sonic Covert Audio Accessory Adaptor is designed to allow the standard Sepura SRC/SRH covert system to be modified into a non-inductive receive accessory, using standard domestic MP3 style dual earpiece earbuds or headsets fitted with a 3.5mm jack plug.

This provides a cost effective receive option when operating in high electro-magnetic noise environments and the issues associated with covert wireless earpieces, or in the event that using a wireless earpiece is not practical for other reasons.

The microphone of the existing covert brooch or neckloop microphone inductor can continue to be used, or as an alternative a miniature microphone can be supplied.

Sonic SRH "Spider" Kit:

The Vehicle Interface Unit provides the connection point for all of the audio and control accessories supplied as part of the installation kit, allowing easy installation and maintenance.

Reception of incoming radio traffic can be switched between loudspeaker and the roof or seat mounted inductive loop, allowing the use of covert inductive wireless earpieces.

Changeover between loudspeaker / loop is carried out on the supplied Switch Panel, which is normally mounted within the glove compartment or centre console area of the vehicle and also provides the system power ON/OFF switch location and system status LED indicator.

The Remote Control Unit provides handheld operation of PTT, Tone, Volume, Emergency and Talkgroup Selection (1-9), with the facility to add additional remote buttons for PTT and Tone operation also provided as part of the installation kit.

Sonic Communications (Int) Ltd can provide a full installation service, either on-site or at our purpose built Specialist Vehicle Installation facility, located in Birmingham.

The Sonic SRH "Spider" Kit provides a fully featured covert vehicle installation system, based around the Sepura SRH handheld TETRA terminal.
