

GSM Negotiator-2

Telephone Monitoring Station

SONIC
COMMUNICATIONS

The NEGOTIATOR-2 system is designed to be used via GSM, PSTN or ISDN communication networks, to provide a flexible and fully integrated rapid deployment communication and recording station.

Housed within a ruggedised transportable case, the NEGOTIATOR-2 station allows a telephone communications link to be established with a 3rd party, using either the integrated PSTN telephone, with CLI, or ISDN telephone, for fixed operation from a house or office location, or via a GSM handset, connected by cable to the station for fully mobile operation. All incoming and outgoing audio is routed to the Operators lightweight headset and can be recorded onto DAT, Minidisk or analogue tape recorders for evidential purposes.

System Carrying Case

NEGOTIATOR-2 also provides the ability to connect a field telephone over 2 core cable, to provide a wired communications link to the 3rd party, if no other communications network is available or useable.

The station can be powered from 240/110 AC mains, an external 12v DC supply or via its internal re-chargeable battery for short term deployment, allowing the communications link to be maintained while mobile to the incident and transfer to the incident area, when alternative mains or battery power will be available.

Facilities and options are available, to allow the use of conventional or IR receive headsets or to remote an external loudspeaker, to enable other Officers to monitor conversations.
